RiskBrief BFSI

Evidence-led risk intelligence with constrained AI and human review

BFSI — Intelligent Risk, Fraud & Financial Experiences

Verified local implementation · 13 October 2026

Google cloud execution and submission remain pending authentication.

A risk brief should show its evidence

Aggregate triage for analysts and reviewers in banking, financial services and insurance.

The problem

Concentration, delinquency changes and alert volumes can be difficult to scan consistently.

An unsupported generated summary can hide its source evidence and uncertainty.

The prototype solution

Calculate illustrative indicators from synthetic data.

Ask Gemini to select supported findings.

Validate each citation, then let an authorized human reviewer decide.

One inspectable workflow

Model-selected findings remain separate from deterministic facts and the human decision.

01 · Submit

Provisioned analyst signs in and loads strict synthetic JSON.

02 · Compute

Local thresholds produce evidence IDs and a reproducible input hash.

03 · Select

Firebase AI Logic asks Gemini for allowed IDs and finding codes only.

04 · Validate

Reject unknown citations, unsupported findings and missing uncertainty.

05 · Review

Save a pending brief. An active reviewer approves or rejects once.

Google-native web demonstration

The original Python/SQLite v0.4 service stays separate; Firebase Hosting serves static assets.

Firebase Hosting	Existing target site configured in source; authenticated deployment remains unverified.
Firebase Authentication	Sign-in-only interface for provisioned accounts; role lookup fails closed.
Firebase AI Logic	Official SDK + Gemini Developer API; candidate gemini-3.5-flash-lite; no Gemini key in client.
Cloud Firestore	Document ownership, active reviewer permissions, one final decision, append-only client events.
Firebase App Check	Production reCAPTCHA Enterprise required; enforcement, API restrictions and quota must be verified.

Synthetic evidence drives every finding

Illustrative, uncalibrated test data — no real portfolio or customer information.

E001 · Retail / synthetic example

52% exposure share

9.1% delinquency; prior 6.1%

3.0 percentage-point deterioration

12 illustrative fraud alerts

Constrained model contract

Input: IDs, fixed segment labels and computed codes.

Output: JSON findings and three mandatory uncertainty labels.

No tools, actions, predictions or new measurements.

Validated IDs render fixed evidence-linked wording.

Governance and explicit limits

Informational support only; the prototype cannot adjudicate credit, fraud or investments.

Identity & review

Rules isolate owner records. Reviewer membership must be active. Final decisions cannot be rewritten by clients.

Evidence validation

Unknown IDs, duplicate citations and unsupported findings are rejected. Synthetic, calibration and human-review uncertainty are mandatory.

Bounded requests

400 output tokens, 20-second SDK timeout, one in-flight UI request. Cloud quotas and App Check still require authenticated verification.

Trust boundary

A static client can be modified. Rules cannot recompute analysis or authenticate model provenance. Client audit is not independently immutable.

Verification is recorded, not assumed

Executed local release checks on 13 October 2026. Service fixtures do not represent real Gemini calls.

10

Domain & controls

6

Chromium / mocked SDK

7

Actual Firestore Emulator

Production build: passed. Desktop 1280 px / mobile 390 px: passed; no external requests or fixture code.

Application npm audit: 0 known vulnerabilities. Frozen Python v0.4: 77 passed, recorded on October 10.

Real Gemini invocation: not verified. Deployment: not verified; target endpoint returned HTTP 404.

Release materials and submission gates

No invented deployments, usage, customers, impact measurements, participants or submission receipts.

Public independent source repository

https://github.com/azizanr007/riskbrief-ai-builder-cup-2026

Required next evidence

Authenticated Spark/billing and App Check checks; one real free-tier Gemini response; HTTPS deployment; genuine public demo video; registered team/dashboard confirmation.

Official dates checked October 13: registration closed October 11; team formation through October 14; prototype deadline October 18. Eligibility: working professionals, 21+, JAPAC, 2–4 registered members. Dashboard template and team status remain unverified.
